08 Taking part	17 Getting help
09 If you lead an idea	

Screens in this guide are drawn to match the live interface. Colours, labels and layout are taken from the production build.

SECTION 01

What the Hub is for

One home for the team's AI ideas, so they stop dying in Slack threads.

Before the Hub, an idea was a message. Someone raised it, three people replied, and a week later nobody could say whether it was being worked on or who owned it. The Hub gives every idea three things a Slack message cannot have: **a permanent link**, **a named owner**, and **a status everyone can see**.

You will use it to do four things:

- **Submit** an idea in under two minutes.
- **Follow** ideas you care about and get emailed when they move.
- **Join** an idea's team in a named role and do the work.
- **See the pipeline** — what is in review, what is stuck, what has launched.

BETA

The Hub is in beta with the TS team. It is an internal tool on the company network — no customer data should ever be entered into an idea.

SECTION 02

Getting an account

There is nothing to fill in. Signing in with Google creates your account.

You do not need an invitation, and there is no registration form. Open the Hub, choose **Continue with Google**, and pick your Skedulo account. The first time you do this your account is created automatically, using the name and email address Google holds for you.

WHO CAN SIGN IN

Only **@skedulo.com** Google accounts. A personal Gmail account is refused, and you will be told why rather than left guessing.

If someone already created an account for you, signing in with Google finds it by email address — you keep your existing ideas, team roles and permissions. You do not end up with a second, empty account.

SECTION 03

Signing in

Choose **Continue with Google** and pick your Skedulo account. That is the whole sign-in — there is no username or password to remember, and nothing to reset.

Because Google handles the sign-in, the Hub never sees or stores a password for you. If your Skedulo Google account is protected by two-factor authentication, that protection carries over to the Hub automatically.

BY DESIGN

The reset screen gives the same confirmation whether or not an account matches what you typed. That is deliberate — it stops the page being used to discover who has an account.

One session at a time

You can be signed in on **one device at a time**. Signing in somewhere else ends the earlier session — the first device returns to the sign-in page and says why.

Session timeout

You are signed out after **30 minutes of inactivity**. At 25 minutes a prompt appears so you never lose work without warning.

Idle warning – appears at 25 minutes

SECTION 04

Finding your way around

One bar, always at the top, on every page.

Top bar – as a team member sees it

TWO HUBS, ONE HEADER

TS Hub has three parts, and / asks which one you want. The header then shows only that part's own navigation: the Ideas Hub gets **Board** and the search box, the Learning Hub gets **Learning Hub**, **My Dashboard** and **Team**, and **Tools** gets its own list. A button on the right crosses back to the Ideas Hub, so you rarely need to go back to /.

For administrators, **Tasks**, **Activity** and **Manage** appear in both. Those pages show the Ideas Hub header.

CONTROL	WHAT IT DOES
TS Hub	The name, top left. Returns you to the hub chooser from anywhere.
Board	All ideas as cards, grouped by status. Ideas Hub only.
Search	Filters the board by idea name as you type. Ideas Hub only.
 Learning Hub	Crosses over to the Learning Hub. Sits beside the search box.
Tools	Small utilities, reached from the home page. See section 15.
+	Opens the Submit an idea form. Ideas Hub only.
 Go to the Ideas Hub	The highlighted button that crosses back. Learning Hub only.
Your avatar	My profile, and Sign out.

NOTE

Administrators see four more items here — Dashboard, Tasks, Activity and Manage. Those are covered in the separate **Administrator guide**.

What's New

After an update you will see a short **What's New** panel the first time you open the Hub. Read it and press **Got it** and it will not come back — the next one appears only when something else changes.

SECTION 05

Reading the board

Every idea, its stage, and who is on it — at a glance.

The board – filters, pipeline strip, idea cards

What each part tells you

ELEMENT	MEANING
Status pill	Solid colour, left of the card — the idea's current stage.
Tag	Outlined chip with a coloured dot — the idea's category. Set by whoever submitted it, from an admin-managed list.
  	Likes, requests and team members on that idea.
Avatars	The team, excluding Observers. Unassigned means nobody has joined yet.
Pipeline strip	Count per stage. Click any stage to filter the board to it.
My ideas	Narrows to ideas you have joined or are following.

Preview or open

The two are different on purpose:

- **Click the card** — opens the full idea page, where you can act on it.
- **Click Preview** — opens a read-only panel to check what an idea is about without losing your place on the board. It has an **Open full page** → link if you decide to go in.

SECTION 06

Submitting an idea

The whole point of the Hub. It should take you under two minutes.

Press the white + in the top bar from any page. Fields marked * are required.

Submit an idea – the form, with example categories

How to fill it in well

FIELD	WHAT TO WRITE
Idea Name *	A short, specific sentence. "Auto-draft the PIR from ticket history" beats "PIR improvement".
Category	One or more tags. Helps leads group related work on the dashboard.
Context *	The situation today. What happens now, who does it, how often.
Pain Points *	What is slow, costly or error-prone about that. Numbers help — "about 40 minutes per ticket".
Expected Benefit *	What improves, and how you would measure it. This is the field leads weigh most.
Expected time frame	Your rough estimate. Not sure yet is an acceptable answer.
Attachments	Word, Excel, PDF or images, up to 5 MB each. Screenshots of the current process are useful.

WHAT HAPPENS NEXT

Your idea is created at **Submitted**, you become its **Initiator**, and it is given a permanent number such as **IDEA-015**. All administrators are emailed. You can paste the idea's link straight into Slack.

WHO IS IN CHARGE

Raising an idea makes you its **Initiator** — the person who spotted it. **Project Lead**, the person accountable for driving it, is left open.

Until somebody takes the lead, **you have every permission the lead would have**: edit the content, move the status, accept or decline requests. You are never waiting on an admin to work on your own idea. The moment someone becomes Project Lead, that authority passes to them.

You can take the lead yourself, or an admin can appoint whoever is actually going to drive it. Nobody else can simply claim it.

BEFORE YOU SUBMIT

Never put customer names, ticket contents or any customer data into an idea. Describe the pattern, not the case.

Inside an idea

One page per idea, split across two tabs.

TAB	WHAT IS ON IT
Overview	What the idea is: context, pain points, expected benefit, files, the team, and the comment thread. This is the tab you land on.
Tasks	The work. A board of cards in five columns, with the number of cards shown beside the tab name.

The page gets wider when you open **Tasks** and the team sidebar steps out of the way, because a five-column board needs the room. Switching back brings it straight back.

The Documentation box

Under **Team & roles** there is a box for everything written about the idea somewhere else — a spec, a spreadsheet, a Figma file, a Confluence page.

Press **+ Add**, give it a name, then choose **Link** or **File**. A link is pasted in; a file is uploaded. Either way it appears as its name with an **Enter** button beside it, which opens the link or downloads the file.

Anyone can add. Renaming or removing is limited to whoever added it, the idea's lead, or an admin — so nobody quietly deletes your document, and you can always tidy up your own.

Starred ideas

A ★ next to an idea's title means an administrator has marked it as important. Starred ideas sit at the top of the board, and work on them counts for a little more on the dashboard's contributors list.

Only administrators can add or remove a star. Everyone else simply sees it.

Auto-draft the PIR from ticket history

IDEA-015 · Led by Khoa Vu · Submitted 2026-07-29 · Target: 3-4 weeks

♡ Like · 4

+ Add request

Join the team as...

Follow updates

CONTEXT

Every Critical or Urgent ticket needs a post-incident review. Today an engineer reads the whole thread and writes the summary by hand.

PAIN POINTS

It takes roughly 40 minutes per ticket, and it happens at the end of a long incident when attention is lowest.

EXPECTED BENEFIT

A first draft in seconds. We would measure time-to-PIR before and after.

An **idea page** – as a team member sees it

Reading down the page: the **status pill and tags**, the **title**, then a line giving the idea's number, its current Project Lead, when it was submitted and its target time frame. Below that the action buttons, the three content sections, the comment thread, and the progress timeline. The sidebar shows who is on the team and in what role, and below it the **Documentation** box.

NOTE

Led by names the current Project Lead, which an admin can transfer. If somebody holds the **Initiator** role, a **Raised by** part appears too. Either is left out while nobody holds that role.

SECTION 08

Taking part

Five things anyone can do on any idea.

Like

One like per person, click again to remove it. Likes are the cheapest signal of interest and leads use them to gauge appetite.

Follow updates

Press **Follow updates** and the button becomes ✓ **Following**. You will be emailed when the idea changes — see [section 10](#). Following does not put you on the team and carries no obligation.

Comment

The comment box sits at the bottom of the **Overview** tab. Use it for anything you would say out loud: a question, a reaction, a bit of context somebody else is missing. Comments are a conversation — nobody has to action them, and nothing is tracked.

If what you want is for *somebody to do something*, that is a request, not a comment.

Removing your own comment asks you to confirm first — a comment cannot be brought back.

Add a request

Open the **Tasks** tab and press **+ Add request**. Give it a short name, and as much detail as you like. Your request becomes a card in the first column, and the project lead is notified.

Requests move left to right across five columns:

COLUMN	WHAT IT MEANS
Pending approval	Raised, not yet decided on. Everything starts here.
Accepted	The lead has agreed it should happen.
In progress	Someone is actively working on it.
Done	Finished.
Declined	The team decided not to do it. The card stays, so the decision is on the record.

WHO CAN MOVE A CARD

Moving a card **into or out of** Pending approval or Declined is a decision, so only the project lead or an admin can do it. If a card is assigned to you, you can move it between **Accepted**, **In progress** and **Done** yourself as the work proceeds.

When two people raise the same idea

Duplicates are normal and not a problem — two people noticing the same thing is a signal, not a mistake. Rather than deleting one, the two can be **merged**.

The idea's lead (or an admin) presses **Merge...**, picks which idea to keep, and selects the duplicates. **Preview** shows an idea without leaving the page; **Promote** switches which one is kept, if you picked the wrong one first.

AN ADMIN HAS TO APPROVE IT

Pressing **Request merge** does not merge anything. It asks an administrator, who reviews it in Manage. Merging cannot be undone, so it never happens on one person's click.

When it is approved, each merged idea's write-up — context, pain points, expected benefit, category, time frame and any extra fields — becomes a single comment on the idea that was kept, and its documentation moves across. Its requests, likes, follows and team are removed. Its link still works: it takes you to the idea it became part of.

Opening a card

Click any card and a panel slides in from the right. It holds the full detail, who raised it, who it is assigned to, and its own comment thread — so discussion about one piece of work stays with that piece of work instead of scrolling past in the main thread.

The little clock on each card

Every card shows how long it has been sitting in its current column — **2d**, **3w**. The clock restarts each time the card moves, so it answers one question: **is this actually moving?**

It turns amber after a week in the same column and red after two. That is a nudge, not a deadline — there are no due dates to set, and nothing is ever late. A card going red just means it has been sitting still long enough to be worth a conversation.

Join the team

Join the team as... opens a role picker. Choose one or more roles, then **Join**. The sidebar updates immediately and you start receiving that idea's emails. **Leave team** steps back off.

ROLE	WHAT YOU ARE TAKING ON
Initiator	Credited with raising the idea. One per idea — the option disappears from this list once somebody holds it.
Project Lead	Accountable for the idea. Edits content, moves the status, decides which requests are accepted. One per idea . Taken by the Initiator or appointed by an admin; not something anyone can claim.
AI Design	Shapes the prompt, model or agent behaviour.
Form / UX Design	Designs the interface or the intake flow.
Data / Ops	Data sources, pipelines, integration and rollout.
Tester	Trials it and reports back. Needed before an idea reaches Pilot.
Observer	Watching, not working. Observers are not shown as avatars on the board.

ONE PER IDEA

Initiator and **Project Lead** each allow only one person. Once somebody holds one, it stops appearing in this list — ask an administrator if it should be transferred to you.

SECTION 09

If you lead an idea

Extra controls appear once you hold the Project Lead role.

Edit the content

Edit content turns Context, Pain points, Expected benefit, the tags, the target time frame and any custom fields into editable inputs. **Save changes** commits them; everyone on the team and every follower is emailed a summary of what changed.

Move the status

A status dropdown sits in the action row. Changing it is the single most useful thing a lead does — it is what the board, the dashboard and everyone's inbox are driven by.

♡ Like · 4

+ Add request

Leave team

✓ Following

In Review ▾

Request deletion

Action row – as the Project Lead sees it

STATUS	MEANS
Submitted	Raised, not yet looked at.
In Review	Being assessed. The team's target is to clear this within 7 days.
Approved	Worth doing. Not started.
In Progress	Actively being built.
Pilot	In trial with real users.
Launched	Live and in use.
On Hold	Paused. Say why in a request so the reason is on record.
Declined	Not proceeding. Same — record the reason.

Changing who is on the team

People add themselves — you do not approve or assign roles. If someone needs to be removed, or the Project Lead needs to move to another person, **ask an administrator**. Only they can edit roles on the team sidebar.

Attachments

+ Upload file accepts Word, Excel, PDF and images up to **5 MB** each. You can remove your own uploads; the lead and administrators can remove any.

Deleting an idea

Deletion is deliberately two-handed:

- The **Project Lead** presses **Request deletion** and gives a reason. A banner appears on the idea and administrators are emailed.
- An **administrator** reviews the request and either deletes the idea or dismisses it. You are not able to delete an idea yourself.

IRREVERSIBLE

Deleting an idea also removes its team, likes, requests and uploaded files. There is no undo.

SECTION 10

Emails you will get

You are emailed about ideas you are on the team of, or following.

WHEN	WHO IS EMAILED
Status changes	Team members and followers
A request is posted	Team members and followers
Content is edited	Team members and followers, with a summary of which fields changed
Someone joins the team	Team members and followers

CHECK YOUR SPAM FOLDER ONCE

Hub emails come from a sending address that is not yet on a Skedulo domain, so the first one often lands in spam. Open it, mark it **Not spam**, and later emails will arrive normally. Doing this once, on your first email, saves you missing updates.

You are never emailed about your own actions. Administrators receive a further set of emails — new submissions, deletion requests, feedback and account changes — listed in the Administrator guide.

SECTION 11

Your profile

How you appear to everyone else in the Hub.

Open it from your avatar, top right → **My profile**.

My profile

How you appear on ideas across the Hub. Your username and email are managed by an admin.

My profile

- **Photo** — PNG, JPG, GIF or WebP up to 2 MB. It replaces your initials everywhere.
- **Avatar colour** — used when you have no photo. Pick one and it stays the same on every screen.
- **Display name** — the name others see on ideas and comments.
- **Region** — pick one of **VN**, **AU**, **UK** or **US**.
- **Timezone** — helpful on a team spread across time zones.

Your **username, email and role are managed by an administrator** and cannot be changed here.

Your password

There isn't one. Sign-in goes through your Skedulo Google account, so there is nothing to change here and nothing that can be forgotten. If you need to change the password on the Google account itself, do that in your Google account settings.

SECTION 12

The Learning Hub

Training tracks you work through at your own pace, ordered by seniority level.

The Learning Hub is a second thing living in the same app as the ideas board. Where the board is about ideas, the Hub is about you: a set of **tracks**, each holding **courses** grouped by seniority level, that you enroll in and work through yourself.

Your seniority level is one of five, and an **admin sets it for you** — you cannot change your own:

POSITION	WHAT YOUR ROADMAP EXPECTS OF YOU
Intern	The Intern tier of courses.
Junior	The Junior tier of courses.
Mid level	The Mid level tier of courses.
Senior	The Senior tier of courses.
Principal	The Principal tier of courses.

Only your own tier is expected of you — the tiers below it are assumed already fulfilled (that is what got you promoted this far), so they are not shown and do not count toward your progress. Once you have finished your own tier you get **one tier of early access** above it — so a Junior who is done with Junior can already see Mid level work.

THE DASHBOARD USES DIFFERENT NAMES
Your dashboard's "Progress by level" chart regroups these five positions into **four** named levels — Foundations, Applied, Intermediate, Advanced — so a **Junior** sees a bar labelled **Applied**. It is the same ladder under a different set of names, and only that one chart uses them. Section 14 has the mapping.

Your level decides which courses your roadmap *expects* of you. If your level looks wrong, ask an admin — it changes what you see.

Enrolling in a track

Open **Learning Hub** in the top bar. The page has two lists: **Your tracks**, the ones you are on, and **Suggested tracks**, which shows every track — including ones you have already joined, so a track you are on appears in both.

A track card carries a course count, an **Enrolled** badge if you are on it, and one link: **Preview roadmap →**. **There is no Enroll button on the card**. The link opens the roadmap in a panel, grouped by stage, and the **Enroll** button sits in that panel's header — so you always see what you are joining before you join it.

There is **no approval step**: nobody has to let you in, and you can be on more than one track at once. Once joined, the button reads **Enrolled ✓** — and clicking it again **unenrolls** you, so take care not to click it to confirm anything.

The badge on your card becomes **Completed** once every course in that track is complete for you.

Preview roadmap – the Enroll button lives here. Once joined it reads **Enrolled ✓**, and clicking it again unenrolls you

WORTH KNOWING

Completion is per person. Someone else finishing a track has no effect on your badge.

SECTION 13

Your Journey

Your roadmap: what to take, in what order, and when you plan to finish it.

A strip across the top carries your avatar, your name, a pill per enrolled track, and how far you are through the courses your own level expects — for example **0 of 19 core courses complete**, with a bar.

Below it, the **Your Journey** panel holds a track filter and the roadmap table itself, showing your own level's courses (plus one level of early access once you have earned it — section 12). Its columns are **#**, **Course**, **Track**, **Platform**, **Est. hrs**, **Target** and **Status**. **Target** shows a dash until you set one.

Clicking a row expands it to reveal a link out to the course on its own platform, an **After this course** line describing what you should be able to do, and the **Wrap-up** button.

Every course on your roadmap sits in one of four states:

STATE	MEANING
Not started	Available, untouched.
In progress	The one you are on. Usually set for you — see Up next below.
Complete	You finished its wrap-up quiz.
Skipped	Passed over. Recorded, not hidden.

Order, dates, and Up next

Rows are ordered by the roadmap's own sequence within your level — there is no manual reordering.

The **Up next** card shows the next two courses you have not finished, dated ones first. Three controls sit on it:

CONTROL	WHAT IT DOES
 Auto Schedule	The only always-visible action, and a labelled button rather than an icon. See below.
⋮ menu	Holds the two less frequent actions: Refresh , which re-checks which courses qualify, and Edit dates .
✓ Done	While you are editing dates, this replaces the ⋮ menu in the same spot, so leaving edit mode never means reopening a menu. Nothing is saved until you press it.

Each row shows the course, its status, and either **Target** with a date or **No target set**, followed by the estimated hours. When everything is done the card reads *“Nothing left to plan — every course is complete or skipped.”*

A target date is **a plan, not a deadline**. Nothing enforces it, nothing chases you, and you can change it whenever you like.

Whichever course is top of Up next flips itself from Not started to **In progress** automatically. It never overwrites real progress — a course already further along is left alone.

#	COURSE	TRACK	PLATFORM	EST. HRS	TARGET	STATUS
1	Claude 101	AI Track	Anthropic Academy	2	—	In progress
Open course on Anthropic Academy ↗ After this course: Use Claude for writing, summarizing, and analyzing documents. Wrap-up						
2	AI Fluency: Framework & Foundations	AI Track	Anthropic Academy	4	—	Not started

Your Journey – a row expands to the platform link, the outcome line and **Wrap-up**

17 Up next Auto Schedule ...
Claude 101 In progress No target set · 2 hrs
AI Fluency: Framework & Foundations Not started No target set · 4 hrs

Up next – ✨ **Auto Schedule** is the only labelled action; Refresh and Edit dates sit behind ...

Auto Schedule and Google Calendar

Auto Schedule books actual study time on your Google Calendar. Pick a level range and a **Complete by** date, and it places one study block per unfinished course in that range.

The Complete by date defaults to the next **annual review date**, which an admin sets centrally. Quick-pick chips offer that date plus 3 and 6 months, or you can type any date.

BEHAVIOUR	DETAIL
Level range	Capped at your own current level. Finish every course in it and you earn one level of early access (section 12) — Auto Schedule then defaults From and To to just that new level, since everything below is already booked.
Block length	One session per course, capped at 4 hours however long the course estimate says.
Existing commitments	It reads your calendar's busy times and avoids them, and avoids double-booking its own blocks.
Running it again	Updates the blocks it already made rather than creating duplicates. If you deleted one yourself, it makes a new one.
Target dates	The dates it picks appear on Up next straight away — the same field the pencil writes to.

The first time, you will be asked to connect Google Calendar. This is a **separate permission from signing in** — connecting it lets the app write study blocks, and it is not part of your login. If the connection later expires or you revoke it, the app notices and asks you to reconnect rather than failing quietly.

The wrap-up quiz

Each course's expanded row carries a **Wrap-up** button. The quiz is one question per card: click any option and it tells you immediately whether it was right. A wrong answer says so and stays clickable — there is **no attempt limit and no lock-out**. A right answer reveals the reasoning and unlocks **Next question**.

Finishing the last question marks the course **Complete** and records how many you got right **on the first click**. That first-try figure is what your accuracy percentage means, everywhere it appears.

NOT EVERY COURSE HAS ONE

Some courses have no quiz written yet. Those say so plainly rather than dead-ending. You can retake any quiz as often as you like; retaking simply overwrites the previous result.

The **Knowledge artifacts** card lists your three most recently completed courses with their question count, when you finished, and your first-try accuracy. Courses completed before this existed show “No quiz data recorded” rather than an invented number.

My Dashboard

Called **My Dashboard** in the top bar. Where your progress is measured, and where locked courses actually live.

Four tiles head the page:

TILE	WHAT IT COUNTS
Roadmap complete	Of what is expected of you <i>by now</i> — your own tier, plus one tier of early access once yours is done — how much is complete. Not the whole track.
Level	Your position, and the next rung up. “Top of the ladder” at Principal.
Weekly streak	Consecutive Monday–Sunday weeks in which you completed a course booked through Auto Schedule .
Ideas shipped	Ideas you raised on the board that reached Launched .

WHY YOUR STREAK MAY READ 0

The streak only counts courses that were scheduled through **Auto Schedule**. Finish a dozen courses without ever using it and the streak stays at **0** — that is correct, not broken. Auto Schedule is the only thing in the app that resembles a booked study session, so it is the only signal available.

My Dashboard – four tiles, then the four *display* levels. A Junior sees a bar labelled **Applied**

Progress by level

This chart is the one place the ladder is renamed. Your five positions are regrouped into **four display levels**, so the name here will not match the position on your profile:

SHOWN AS	YOUR POSITION
Foundations	Intern
Applied	Junior
Intermediate	Mid level
Advanced	Senior <i>and</i> Principal, sharing one bar

It is display only. Every rule that actually gates a course — ordering, what your roadmap expects — uses the five positions, not these four names.

Below the bars, **My courses** is the same list as Your Journey, not a read-only copy: you can open a wrap-up quiz from here exactly as you can there.

The mind map

The **mind map** lives here, at the bottom of this page, with its own track filter. It shows the whole roadmap, every tier from Intern through Principal, so you can see the road ahead — unlike Your Journey's own list, which only shows your current tier (plus early access, once earned).

2

Agentic workflows

AI Track · Anthropic Academy

Not started

Mind map — every course is workable regardless of tier; there is no lock and nothing to skip

Nothing on the mind map is locked — a course is workable whatever tier it belongs to, and the tiers below your own are assumed already fulfilled rather than something still owed. (An older version of this app gated tiers behind a lock and offered a **Skip prerequisite** action; both were removed once tiers stopped being cumulative.)

The rest of the page

CARD	WHAT IT TELLS YOU
Learning activity	Courses completed, hours logged, in progress, and your current streak. All-time, not this month.
Confidence by skill	Your quiz accuracy grouped by skill rather than by course, counting only courses you have actually completed — a course you have started but not finished does not count yet. A skill with no completed course toward it is left out entirely rather than shown at zero.
What's next	The same next pick as Your Journey's Up next, plus a nudge drawn from the last course you finished.
Application	Every idea you have raised, with its board status. This is the one place the two halves of the app meet.

NOT BUILT YET

Two things people reasonably expect are genuinely absent. **AI-generated summaries and exams** — the mind map is a roadmap view, not generated study material. And **reminders**: Auto Schedule puts time on your calendar, but nothing nudges you when it arrives. Neither is hiding; neither is there.

The dashboard also cannot tell you *which* course or skill an idea came from. Nothing in the app links the two, so the Application card shows the idea and its status, and no attribution.

SECTION 15

Tools

Small utilities that run on your own account.

The third choice on the home page is **Tools**. Each one works on your own data using your own Google account, and none of them keep what they find on this app's server.

Drive Sharing Check

Finds files in your Google Drive shared by link or with the whole organisation, and lets you narrow that access back down. Originally built by Thao Lai as a standalone tool.

You connect your Google account separately from signing in to TS Hub. That is deliberate: asking for your Drive at sign-in would prompt everyone who opens the ideas board, whether or not they ever use this.

LEVEL	WHAT IT MEANS
Critical	Anyone with the link can open it. If Google can also index it, the listing says so.
Warning	Everyone at your organisation can change it.
Info	Everyone at your organisation can see it, but not change it.

A file's level comes from its widest sharing, so one over-exposed setting decides it however tidy the rest are.

Above the results, a bar shows how many findings sit at each level, alongside an **OK** figure — everything else you own, shared with named people only. Clicking a level narrows the list to it; clicking it again clears the filter. On a Drive large enough that the scan stops early, the panel says so rather than presenting a partial count as a total.

Each finding names the file, the folder path it sits in (every folder in the path opens in Drive), who owns it, and when it was created.

IT WILL NOT TOUCH OTHER PEOPLE'S FILES

Files someone else owns are listed and classified, but offer **Remind owner** rather than a change — it opens an email naming the file and the problem. Google would refuse the change anyway, but the real reason is that quietly re-sharing another team's document is not this tool's call to make.

Change, on your own files, restricts access to named people, limits it to your organisation, or leaves it open at a level you pick. Access it creates is never made discoverable by search. The first time you change something Google asks for broader permission — scanning alone never needs it.

Plan fix time appears once the scan finds anything critical or warning. Pick 15 minutes, 30 minutes or an hour, pick a day in the next working week and a start time, and the event opens in Google Calendar already filled in — titled, and listing the worst findings with their links so it is a working list rather than a reminder to make one. There is also a **.ics** download for anyone not on Google Calendar.

IT CANNOT WRITE TO YOUR CALENDAR

Saving the event happens in Google Calendar, not here, so the tool never asks for permission to change your calendar. **Check my calendar** is optional and separate: it asks only for free/busy, which tells it when you are booked and nothing about what the bookings are. Skip it and every working hour is offered instead.

Watched folders sends an email when sharing inside a folder changes, including folders other people own. Add a folder by typing part of its name and picking it from the suggestions, or by pasting a Drive link. The watching is a Google Apps Script you install

once under your own account, so it runs on Google's timer rather than this app's server, and no token of yours is stored anywhere.

Under **When it checks, and who it tells** you set how often it runs — every 15 minutes, every 30 minutes, hourly, daily, or weekly, with a day and time for the last two — and the address to notify. Leave the address blank and it goes to the Google account running the script; several addresses can be separated by commas. Times follow the timezone set on the Apps Script project, not your own.

IT ONLY WRITES WHEN SOMETHING CHANGED

Each run compares what it finds against the previous run. No change means no email, so a quiet week is silence rather than an all-clear. Until you pick a schedule here, the watcher keeps whatever one was set in the script itself.

WHAT IT NEVER DOES

It reads file names and sharing settings. It never reads what is inside a file, and nothing it finds is sent to this app or kept centrally.

Reference

Limits and timings

ITEM	VALUE
Who can register	@skedulo.com addresses only
Sign-up and reset codes	6 digits · valid 10 minutes · 5 attempts
Session timeout	30 minutes idle · warning at 25
Sessions per account	1 — a new sign-in ends the previous one
Idea attachment	5 MB per file · Word, Excel, PDF, images
Profile photo	2 MB · PNG, JPG, GIF, WebP
Project Leads per idea	1
Likes per person per idea	1
Review target (In Review)	7 days
Ideas shown on the board	50 most recently updated

Expected time frames

The options in the submit form: **1-2 weeks**, **3-4 weeks**, **4-8 weeks**, **1 quarter**, or leave it as **Not sure yet**. Administrators maintain this list.

PROVISIONAL

The tag list carried over from the original prototype and does not yet match the proposed categories (Support/CX, Internal Ops, Knowledge, Reporting, Other). Confirming that list is an outstanding decision for the team; an administrator can change it in minutes once the team agrees.

SECTION 17

Getting help

A **Send feedback** button sits in the bottom-right corner of every page. Use it for anything — a bug, a confusing label, a missing feature. It records which page you were on, so you do not need to explain where you were.

A UI mockup of a feedback form. It consists of a large, light gray rectangular box on the left. To its right is a smaller, white rounded rectangle with a thin gray border. Inside this white box, at the top, is a text input field with the placeholder text "What happened, or what would help?". Below the input field are two buttons: a white "Cancel" button with a gray border and a blue "Send" button with white text.

Feedback – available on every page

Feedback goes straight to the administrators, who are emailed as soon as you send it. For anything urgent, or if you cannot sign in at all, message the **project admin** directly.
