

TS - AI Ideas Hub - Admin Guideline

An extension to the user guideline, covering the four tools only administrators can see and the extra authority an admin account carries on any idea.

Everything in the user guideline also applies to you. This document covers only what is additional.

SECTION 01

What an admin can do

Four extra tools, and authority over every idea rather than only the ones you lead.

An administrator account is a **workspace-level** role, separate from the per-idea roles everyone holds. It is set on your account by another administrator; there is no way to grant it to yourself.

CAPABILITY	MEMBER	PROJECT LEAD	ADMIN
Submit, like, follow, comment	Yes	Yes	Yes
Join a team in any role	Yes	Yes	Yes
Edit an idea's content	—	Own idea	Any idea
Change an idea's status	—	Own idea	Any idea
Triage requests	—	Own idea	Any idea
Edit team roles, transfer the lead	—	—	Yes
Set or correct the Initiator	Can take it	Can take it	Assign to anyone
Remove someone from a team	—	—	Yes
Delete an idea	—	Request only	Yes
Dashboard, Tasks, Activity, Manage	—	—	Yes

WORTH KNOWING

A Project Lead cannot manage their own team. Adding a role, removing a member or transferring the lead all require an administrator — so those requests will come to you.

SECTION 02

The admin top bar

Four items appear that members never see.

Admin top bar – with the Manage menu open

The **Manage** menu opens on hover, so you can jump straight to a section without loading the page first. Clicking **Manage** itself opens the page with a dropdown to switch sections.

SECTION 03

Dashboard

The leadership view. Read the flags first — they are the only part that asks you to act.

A period switch at the top offers **All time** or **This quarter**, which filters the idea-based figures.

Dashboard – KPI tiles, funnel and attention flags

What each tile means

TILE	HOW IT IS CALCULATED
Total ideas	Every idea in the period, with the count added this quarter beneath.
Active (in review → pilot)	Ideas at In Review, Approved, In Progress or Pilot. Work in flight.
Launched	Ideas at Launched, and what share of all ideas that is.
Team participation	The share of accounts that have taken part in at least one idea.
Est. hours saved / week	Not yet tracked. The tile is a placeholder until the team agrees how to measure it.

Needs attention

Two rules raise a flag, both about ideas going quiet rather than ideas being wrong:

- An idea has been **In Review for more than 7 days** — the team's review target.
- An idea is **On Hold** with no update from its lead for an extended period.

Below these sit **Ideas by category & engagement**, an **Ideas by engagement** table (likes, requests, members and target per idea) and **Top contributors**.

READ WITH CARE

Top contributors currently scores `ideas × 5 + requests × 1 + team memberships × 2`. That rewards volume rather than outcome — someone who comments frequently can outrank someone who led an idea to launch. A replacement is drafted in `docs/contribution-scoring.md`. Treat the current ranking as indicative, not as a performance measure.

SECTION 04

Manage – Tags

The category list offered on the submit form.

Add a tag, remove one, and set each one's colour. The colour is used for the chip on every card and idea page, so pick distinguishable ones.

SAFE TO CHANGE

Removing a tag strips it from every idea that carries it. **No idea is deleted.** Renaming is not supported — add the new tag, retag, then remove the old one.

OUTSTANDING DECISION

The list is still **Work / Personal Development / Family / Home**, carried over from the original prototype. The proposed categories are Support/CX, Internal Ops, Knowledge, Reporting and Other. Changing it takes a couple of minutes here once the team agrees.

SECTION 05

Manage – Form fields

Extra questions on the submit form, beyond the six built-in ones.

Add a field with a label and a type — text, long text, number or a dropdown with your own options. Mark it required if an idea cannot be assessed without it. Fields can be reordered, and the order applies to the form immediately.

NOTHING IS LOST

Removing a field **archives** it. Answers already given on existing ideas are kept and still displayed, marked (*archived*). The field simply stops appearing on the form for new submissions.

The six built-in fields — Idea Name, Category, Context, Pain Points, Expected Benefit and Expected time frame — are shown here for reference but cannot be removed.

SECTION 06

Manage – User accounts

Everyone with access, and what they can do.

ALSO SETS SENIORITY

The **Position** column on this table is where a learner's Learning Hub level is set — Intern, Junior, Mid level, Senior or Principal. Nobody can set their own, so this is the only place it changes.

It is not cosmetic. A learner's position decides which tier of courses their roadmap expects, which courses are locked, and where they sit in Team view's distribution and averages. Setting it wrong gives that person the wrong roadmap, so it is worth getting right when you create the account.

User accounts

USERNAME	EMAIL	NAME	ROLE	ACTIONS	
khoa.vu	khoa.vu@skedulo.com	Khoa Vu	admin ▾	Reset pw	Delete
trung.vo	trung.vo@skedulo.com	Trung Vo	member ▾	Reset pw	Delete

User accounts – inline editing, one save

Edit a row in place and save. You can change someone's username, email, display name and role, or delete the account. There are no passwords to manage — everyone signs in with their Skedulo Google account. Making someone an **admin** gives them everything in this guide.

DELETING AN ACCOUNT

Deleting removes that person's team memberships, likes and requests along with the account. If they led an idea, that idea is left **without a Project Lead** — reassign it afterwards. Consider switching them to **member** instead if they are only changing role.

Most people will never appear here: anyone with a **@skedulo.com** address can create their own account, confirmed by an emailed code. Use this page for role changes, corrections and departures.

SECTION 07

Manage – Feedback

Everything sent through the button in the bottom-right corner.

Each entry shows who sent it, when, and **which page they were on** — so you rarely need to ask what they were looking at. Mark an item **Resolved** when it is dealt with, or delete it. Resolved items grey out but stay on the list.

You are emailed as soon as feedback arrives, so this page is a record rather than something to poll.

SECTION 08

Manage – Delete requests

The queue of ideas a Project Lead has asked to have removed.

Each entry shows the idea, its number, who asked, when, and the reason they gave. You have two choices:

- **Delete idea** — removes it permanently.
- **Dismiss** — clears the request and the banner. The idea stays exactly as it was.

IRREVERSIBLE

Deleting an idea also removes its team, likes, requests and every uploaded file. There is no undo and no recycle bin. Open the idea and read it before you delete.

A dismissed request leaves the lead with full use of the idea — dismissing does not restrict them in any way.

Manage – Merge requests

Duplicate ideas waiting to be folded together. Nothing merges without you.

When two people raise the same idea, the lead of one can ask for them to be merged. That request lands here. Each entry shows the idea being **kept**, the ideas to be **merged in**, and who asked.

CHOICE	WHAT HAPPENS
Approve & merge	Carries the merge out. You are asked to confirm first, naming the ideas involved.
Reject	Leaves every idea untouched. You can give a reason, which is recorded.

What approving actually does

For each idea being merged in:

- Its whole write-up — context, pain points, expected benefit, category, time frame and any custom fields — becomes **one comment** on the idea being kept, attributed to the person who raised it.
- Its **documentation moves across**: files and links both.
- Its **requests, likes, follows, team and comments are removed**.
- The idea itself stays, marked as merged. Its link redirects to the idea it became part of, so nothing anyone has shared in Slack breaks.

Members and followers of both ideas are emailed, including the people who followed the idea that disappeared.

IRREVERSIBLE

There is no unmerge. The requests, likes and team of the absorbed ideas are gone. Open both ideas and read them before approving — the request tells you what someone wants, not whether they are right.

ADMINS QUEUE TOO

Your own merges appear in this queue as well, and you may approve them yourself. The point is not a second pair of eyes — it is the record. The request stores who asked and who decided as separate names, so a merge you approved for yourself is plainly visible in the activity log.

If part of a merge fails — an idea already merged by someone else a moment earlier, for instance — you are told how many went through and how many were left untouched. The ones that failed are unchanged.

SECTION 10

Learning Hub – Team view

Every enrolled learner’s progress, and who needs help.

READ THIS FIRST

This app has **no manager hierarchy** — there is no concept of “my direct reports” anywhere in it. Team view is gated on admin, exactly like Dashboard and Manage. That means **any admin sees every enrolled learner org-wide**, not a team scoped to them. Treat it as an org-wide view, because that is what it is.

Open **Team** in the top bar. Four tiles head the page:

TILE	HOW IT IS CALCULATED
Team completion	The average of each learner’s own percentage. Everyone counts equally, whatever the size of their roadmap — so it matches what the roster’s own % column visibly averages to.
Active this week	How many learners touched anything in the last 7 days. A rolling window, not a Monday-to-Sunday week.
Avg exam accuracy	First-try correct answers over total questions, across everyone’s courses pooled together.
Ideas shipped	Ideas raised by an enrolled learner that reached Launched .

None of these carry a month-on-month trend. That is deliberate: nothing snapshots history, so a delta would have to be invented.

Needs support

The one card worth checking regularly. A person appears once, under the most urgent reason that applies:

REASON	TRIGGER
Stalled	Has gone quiet — hasn't touched their roadmap in weeks. Takes priority, since silence is more urgent than trailing.
Struggling	Their own average first-try accuracy is below 70% .
Behind	Their percentage complete is below the team's own average — a moving comparison, not a fixed target.

NEEDS SUPPORT · 3

Thu Nguyen Duong
No activity on "Prompting patterns" for 3 weeks

Stalled

View roadmap

Ha Anh
First-try accuracy 61%, below the 70% mark

Struggling

View roadmap

Thao Lai
34% complete, team average is 52%

Behind

View roadmap

Needs support — one row per person, under the most urgent reason

ON THAT 70%

It is the only hardcoded number anywhere in the Learning Hub, and it exists because it was explicitly asked for. Everywhere else the wrap-up quiz is deliberately unscored and ungated — a learner is never blocked by a quiz result. Reading "Struggling" as a fail mark misrepresents it.

Each row has a working **View roadmap** button, which opens the same drill-down described below.

The roster

One row per learner: name, **Level** → **target**, enrolled tracks, percentage of core courses complete, in-progress count, **Pace**, **Avg Accuracy**, last activity, and how many board ideas they have raised. Filter by track; sort by name or percentage.

Pace is three states in priority order: **Stalled**, then **Behind** (below the team average), then **On track**. There is no fixed pacing target — the comparison always moves with the team.

Skills, distribution and application

PANEL	WHAT IT SHOWS
Coverage (heatmap)	One row per skill, one column per learner, bucketed None / Learning / Proficient / Strong. Skills are whatever the team's courses are actually tagged with, strongest first. None means no engaged courses for that skill — not a zero score.
Distribution	How many enrolled learners sit at each seniority level.
Application	A funnel of ideas raised by enrolled learners, using the board's own statuses. On Hold and Declined are excluded, as the board treats them as off-timeline. Below it, how many learners have raised at least one idea; click to expand a per-person breakdown.

Drilling into one person

Clicking a roster row opens that learner's roadmap **read-only**. You cannot reorder it, and the **Wrap-up link is hidden entirely** — an admin cannot open someone else's quiz. It is scoped the way the learner's own view is: their tier and below, plus one tier of early access.

It is the roadmap table only, not their full dashboard. You will not see their quiz statistics or skill confidence here.

The annual review date

In the roster card's header sits a pill reading **Annual review** with a date. Click it to edit.

THIS ONE REACHES EVERY LEARNER

That date is the default **Complete by** value in every learner's Auto Schedule dialog. Change it and every learner picks up the new default the next time they open that dialog — live, with no deploy. It is the only admin setting in this app that changes what everyone else sees on their own page.

SECTION 11

Tasks

A shared to-do list for administrators.

Unrelated to ideas — it is a plain checklist that every admin sees and can edit. Type an item and press or **Add**. Tick it to complete it; completed items collect under a **Done** heading with a count. The **X** removes an item outright.

Use it for the running work of administering the Hub: confirming the tag list, chasing a stalled review, tidying up a duplicate account.

SECTION 12

Activity log

Who did what, and when.

Activity log

Every notable action in the Hub. Entries are kept for 14 days and removed automatically after that.

Anyone ▾

All types ▾

From

2026-07-01

to

2026-07-31

18 entries

7/31/2026, 09:14:02	Khoa Vu	moved "Auto-draft the PIR from ticket history" to In Review
7/30/2026, 16:48:31	Trung Vo	joined a team as Tester, Data / Ops
7/30/2026, 11:02:44	Sked Admin	edited Context, Expected benefit on "PIR Automation"

Activity log – filters and entries

Filter by **person**, by **type** (Ideas, Accounts, Form fields, Feedback) and by **date range**. The date filter uses your own timezone, so the boundaries match the timestamps on screen. **Clear** resets everything.

14-DAY RETENTION

Entries are deleted automatically after 14 days. There is no export. If you need a record for a review or an audit, copy it out before it ages away.

SECTION 13

Authority on any idea

An admin sees the Project Lead's controls on every idea, plus two of their own.

Open any idea and you can edit its content, change its status and triage its requests, exactly as its lead can. Two further controls are yours alone.

Editing the team

Stars

Only you can star an idea. The ★ beside the title is a control for administrators and a plain marker for everyone else. Clicking it asks you to confirm, and the change is written to the activity log.

A starred idea sits at the top of the board, and every contribution to it counts **1.2x** on the dashboard's contributors list. Use it sparingly — starring everything scores the same as starring nothing.

Appointing a Project Lead

Whoever raises an idea is now its **Initiator**, and Project Lead is left open. Until somebody holds the lead, the Initiator has the lead's permissions, so a new idea is never stuck waiting for you.

Only you or the Initiator can put someone in the Project Lead seat — it is not a role people can claim for themselves, because it carries authority over someone else's idea. Set it from the Team & roles sidebar.

Ideas created before this change are untouched: their creator still holds Project Lead.

In the **Team & roles** sidebar each member's roles become clickable chips. Tick and untick to change them, and ✕ removes the person from the team.

Team & roles – the admin view, with editable role chips

Assigning **Project Lead** to someone new **removes it from the current holder automatically** — only one per idea is allowed, and the app enforces it rather than warning you. **Initiator** behaves the same way.

INITIATOR VS PROJECT LEAD

Initiator credits whoever raised the idea. It is optional — submitting does not grant it — and anyone can take it from the join dialog while it is free. Reassign it here if the wrong person is credited.

Project Lead is accountable for driving the idea, and is granted automatically to whoever submits it. It is expected to move — reassign it whenever the person driving the work changes.

Deleting an idea

A **Delete idea** button sits in the action row on every idea. It does not need a request first — the request queue exists so leads can ask, not because you need permission.

USE SPARINGLY

Because an admin can edit any idea's content and status, it is easy to change something the lead is in the middle of. Prefer posting a request and letting the lead act. Step in directly when the lead has left, is away, or the idea has gone quiet.

SECTION 14

Emails admins receive

On top of the emails you get for ideas you are on the team of, or following.

WHEN	WHAT IT TELLS YOU
A new idea is submitted	Who raised it and what it is. Your cue to start the review clock.
Deletion is requested	Which idea, who asked, and the reason given.
Feedback is sent	The message and the page it came from.
A user account changes	An account created, edited or deleted — including by another admin.
The submit form changes	A field added, edited, reordered or archived.

You are never emailed about your own actions, so a busy admin does not fill their own inbox.

DELIVERABILITY

Hub email is sent from an address that is not yet on a Skedulo domain, so the first message to each person usually lands in spam. Tell new joiners to mark it **Not spam** once. Moving to a verified Skedulo sending domain is the permanent fix.

SECTION 15

A suggested rhythm

Not enforced by the tool — a starting point the team can adjust.

WHEN	WHAT TO CHECK
As emails arrive	New submissions. Move an idea to In Review so the 7-day clock is visible to everyone, rather than leaving it at Submitted.
Weekly	Dashboard → Needs attention. Clear anything past the 7-day review target, and chase On Hold ideas that have gone quiet.
Weekly	Manage → Delete requests and Feedback . Both are short queues; leaving them makes people stop using them.
Monthly	Manage → User accounts. Remove leavers, and check nobody holds admin who no longer needs it.
Quarterly	Switch the dashboard to This quarter for a review. Note which ideas launched and what the funnel shows about where work stalls.

Two things to keep an eye on

- **Ideas with no Project Lead.** The board shows them as **Unassigned**. An idea with no owner will not move on its own — the Initiator credits who raised it, and is not a substitute owner.
- **The activity log ages out at 14 days.** If a decision needs a paper trail beyond that, record it as a request on the idea, where it is kept permanently.
